TAILGATE SERVICE BULLETIN

SERIAL NUMBER PLATE

The Serial Number Plate must be attached to the unit at time of installation to ensure proper identification and maintain warranty. Without this serial number plate attached, it may be difficult for PHIL to assist with future replacement parts and/or assist with warranty or service needs if the situation arises.

Not all tailgates are the same. Since 1969, PHIL has engineered thousands of different tailgate designs for almost every make and model of off-highway haul truck, many of which have unique parts. It is because of this that we need the tailgate serial number to be able to assist with installation questions or replacement parts.

You may reach us for information on the Autogate® Tailgate and other PHIL products at:
